

DR250 is now UL Listed

product improvement description

Effective immediately all DR250 models will be UL 1682 listed for “Non-Load Break” applications. Previous models of the DR250 were not UL listed – customers that needed the UL listing were directed to purchase the DR225 model which is UL listed.

The DR250 is now UL1682 listed.

Note on Wiring Requirements:

The DR250 obtained the UL listing using 4/0 AWG Type W Wire.

DR225 is no longer in catalog

Now that the DR250 is UL listed there is little reason for Meltric to offer the DR225 model, since the DR225 and DR250 are the same price and the DR250 offers greater ampacity. In order to satisfy demand from the installed base, DR225 models will continue to be available but it will not be listed in the 2007 catalog or price list. Contact customer service if you need to order DR225 models.

DR250 is not yet CSA listed

Based on successfully achieving the UL listing, it is anticipated that CSA listing of the DR250 will be obtained in the near future. However, at this point the device is not CSA listed. If CSA listing is absolutely required, contact customer service to check if the DR250 is CSA listed at time of order.
