

Rubber Power Distribution Boxes

product description

Rubber boxes are offered in one, two and three tier configurations

Meltric now offers Rubber Power Distribution Boxes in both standard and custom configurations. These boxes will provide a compact, durable solution for portable power distribution needs.

In particular, large facilities such as mines, shipyards, and construction sites will benefit from being able to utilize Meltric Deconnectors to distribute power for welding, lighting, pumps and other electrical equipment.

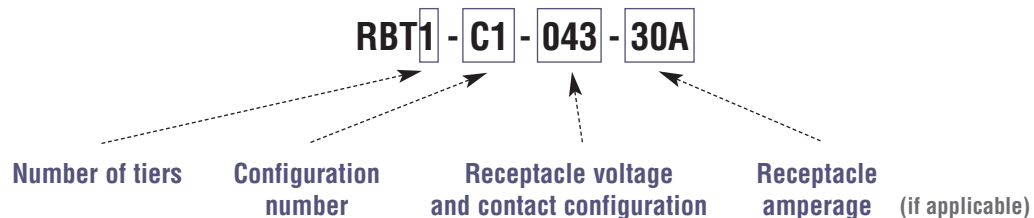

Power receptacles, circuit protection and convenience outlets are available in a variety of configurations and sizes. Standard boxes provide NEMA 3R watertightness.

how to order

Choose from standard configurations on pages 166 – 168 in the 2009 catalog or contact Meltric customer service for custom configurations.

Typical Part Number

Leadtimes for standard configurations will be three to four weeks. Custom configurations may take an extra week.

pricing

List prices for rubber power distribution boxes are NOT published in the 2009 price list due to expected cost fluctuations throughout the year. Budget prices are included in this announcement but final list prices must be confirmed with customer service before an order is placed.
